We are pleased to announce the appointment of Julie Hardesty to the position of Metadata Analyst for the IU Libraries Digital Library Program, effective August 14, 2012. In this position Julie will work with colleagues from throughout the Libraries and IU. She will provide long-term strategies for metadata management, and will participate in the design and development of services to support preservation of and access to digitized and born-digital content from IU's collections.

Julie has been working on behalf of the IU Libraries since 2002, when she first started as a Systems Analyst/Programmer with UITS Library Information Systems, developing and maintaining IUCAT and [OneSearch@IU](#). In 2007 Julie moved to the position she has held since that time, User Interface Design Specialist. Julie's unfailing positive outlook and good humor are appreciated by her colleagues, and that, in addition to her understanding of the Library's digital initiatives and her technical skill have served, and will continue to serve her well. Please join us in welcoming Julie to her new position.
